2017 Brock International Prize in Education Nominee

Heleen Terwijn

Nominated by Mary Burns
Heleen Terwijn
Founder and Director: IMC Weekend School (Netherlands)
Heleen Terwijn
About Heleen and the IMC Weekend School

In 1998, Heleen Terwijn, a Dutch psychologist/psychotherapist as part of a university research study in immigrant communities in Amsterdam, found alarmingly high depression rates, a lack of future orientation, and disaffection with school among pre-teens in these communities. Profoundly impacted by what she found, Terwijn created a program to capitalize on the natural enthusiasm of children and founded the internationally acclaimed IMC Weekend School. She approached International Marketmakers Combination for funding and they became the Weekend School’s first sponsor. Now, over 100 companies and foundations—not the government—fund the Weekend Schools.

Each Saturday and Sunday at the Weekend School—in 10 schools in the Netherlands, 3 in Belgium and 1 in Hong Kong—volunteer guest teachers—all professionals—teach courses in journalism, entrepreneurship, law, medicine, and philosophy to youth aged 10-14. Upon graduation from this three-year program, students join an alumni program (which is unique for Holland and Belgium) in which, among other things, they mentor young students and volunteer at the Weekend School. Research by numerous Dutch universities, some of which is attached in this portfolio, demonstrates that the Weekend School fosters future perspectives, persistence in school, and a sense of belonging to society. So successful has its been approach that it is now being adopted in the formal Dutch education system.

It’s important to note that the majority of these students are low-income children of Moroccan (mainly) and Muslim immigrants. Unlike the U.S., where Muslims are quite successful, Muslims in Europe often experience social exclusion, not just in the Netherlands, but across the continent. Weekend School students come from neighborhoods where parents do not speak Dutch, where parents have little education and in many cases, low levels of literacy, where crime and drugs and poor social behavior are rampant. As one 22 year old alumnus of the Weekend School, the son of Pakistani immigrants, who now volunteers at the Weekend School shared with me: “The Weekend School changed my life. All I ever saw was drug dealers and users. The first time I saw a lawyer at the Weekend...”
School, I was in shock. There were no lawyers in my neighborhood." This young man now studies architecture at university. Because of its work, the Belgian government invited the Weekend School to work in Molenbeek, Belgium, the neighborhood from where both Paris and Brussels attackers originated. Students selected for the Weekend School have often been identified as low performers or “at risk” in formal Dutch schools.

**IMC Weekend School**

**Mission**

The IMC Weekend School strives to prepare youth from all social classes and all school levels for wholeheartedly taking up a role in society. According to IMC Weekend School, the ability to focus one’s motivation is the highest educational outcome. To that end, Weekend School feeds youth’s natural curiosity with real-life subject matter, taught by passionate volunteer experts. In a three-year course, Weekend School enables youth to experiment with interesting options; learn to know their capacities, and develop the audacity to pursue their interests.

**Vision**

Weekend School education builds upon the developmental fact that all youth are motivated to explore the world. At the Weekend School, youth do not learn ‘for later,’ but learns what later is. Through experimentation with social roles in real-life contexts, Weekend School prepares students for the most significant step after their school careers: a motivated step into society.

IMC Weekend School provides extracurricular education to youth in the receptive age of 10 to 14. Each weekend, volunteer professionals teach them their jobs. The three-year program comprises academic subjects (alpha, beta, gamma), the arts, socially relevant subjects such as journalism, politics and entrepreneurship, and subjects of the students’ own choosing. Interaction between youth and guest teachers is the core of Weekend School education. Weekend School is for youth from all school levels.

After the Weekend School diploma, alumni enroll in an alumni program (IMC Alumni), now consisting of 2087 alumni. This program provides a variety of follow-up activities, such as master classes, leadership trainings, job readiness trainings, communication skills, coaching and tutoring. IMC Alumni organizes specific activities for 18+ alumni, most notably trainings to become guest teachers for the younger generations. Weekend School alumni embody Weekend Schools’ ideals—to be well informed, motivated,
and involved citizens. While alumni networks are common in the U.S., they are not at all common in the Netherlands, and this is one of the first and the few.

Figure 3: Weekend School students serve as judge-for-a-day in a Dutch court

Building a Global Network

The organization searches for social entrepreneurs who are eager to set up Weekend Schools in underprivileged neighborhoods (immigrant communities) in larger cities of Europe. Social entrepreneurs are trained at the Weekend School’s headquarters in Amsterdam, and receive subsequent on-the-ground support. Social entrepreneurs are expected to organize their own fundraising and to set up their own independent organizations. As sister schools, they work with the same concept and ideals, share knowledge, and organize alumni exchanges. The Weekend School assesses potential partner’s financial capacity, and conducts interviews to assess the social entrepreneurs’ motivation, capacities to set up an organization, capabilities to work with the target group and develop the Weekend School concept.
Helena Johanna (Heleen) Terwijn CV

Education

1993, Psychology, University of Amsterdam

2004, Psychotherapy, RINO Leiden
Four-year studies in integrative psychotherapy: psychoanalysis, cognitive/behavioral therapy, and family therapy. Work experience with (among other) post-traumatic stress disorder, eating disorders, depression, and family therapy.

Study groups

• 1993 – 2007, Monthly gatherings of the “Sociologists' society for the study of psycho and socio genesis of mentalities” (Founded by Sociology professor Abram de Swaan).

Work

1994 – 1997, Researcher, University of Amsterdam, Social Psychology
Grants from the State Secretary of Education, and the 'Fund for Social Studies.' Studies into motivation of youth in the first large immigrant neighborhood in Amsterdam. Following this study: founding of IMC Weekend School.

1997 - present Founder and director of IMC Weekend School.

Current Supervisory Positions (not for profit)

• Supervisory board (secretary) Save the Children, the Netherlands, 2011-present
• Chairwoman, “Jongeren Die het Kunnen” (Youth that Can), an organization founded by Weekend School alumnus Virgil Tevreden for the empowerment of youth with low IQ and behavioral problems, 2012-present
• Vice-chair, supervisory board, “Nederlands Philharmonisch Orkest” (Dutch Philharmonic Orchestra), 2011-present

Other

• 2004 GMF Fellowship for Young European Leaders; study tour throughout the United States.
• 2006 GMF Study Grant for the study of American initiatives to combat social exclusion.
• 2009-2014 Member of the Dutch committee for the selection of GMF fellows (Young Dutch Leaders).
• 2000 – present: Advisor to a wide variety of institutions, family foundations and individuals for setting up or supporting social initiatives.
• Since 2009, Member of the “Amsterdamsche Kring” (founded May 1945), a group of prominent Amsterdam citizens committed to strengthening the city and its surroundings.

Awards Founder/Director IMC Weekend School
• 2003 Edgar Donckers Prize for Dutch Cultural Integration.
• 2009 Winner at the Marketplace of Ideas, United Nations, Alliance of Civilizations.
• 2010 Finalist WISE Awards, World Innovation Summit for Education.
• 2011 Ziggo Prize for the Open Society.
• 2013 “Hélène de Montigny Prijs,” irregularly awarded prize for “a person that according to a commission under chairmanship of the Rector Magnificus of the University of Amsterdam has exceptionally contributed to mankind in general.”
• 2014 Knighthood, “Ridder in de Orde van Oranje Nassau.”

Letters of Reference

Dear Sir/Madam,

As your web site states, the Brock International Prize in Education recognizes an individual who has made a specific innovation or contribution to the science and art of education, resulting in a significant impact on the practice or understanding of the field of education. In my opinion, Helen Terwijn is exactly that individual.

I became acquainted with IMC Weekend School in my position of alderman of Education in Amsterdam. Ever since, I have been honored with chairing the diploma ceremonies. When I became mayor of Rotterdam, I remained involved in the work of Helen with IMC Weekend School, and became a proud ambassador. The two branches in Rotterdam, along with the other eight branches throughout the Netherlands, make an innovative and inspiring impact on society.

One of IMC Weekend School's great assets, is that it brings society into schools, thus preparing youth from all social classes and education levels for a role in society. Society enters the schools not only in the form of companies and institutions, but more importantly through a vast number of guest teachers and other volunteers who bring their knowledge, passions, values and inspiration into the classrooms. In addition, the Weekend School provides children from disadvantaged neighborhoods with life changing support. With each Weekend School student, the achievement gap closes a little. In my opinion, Helen is changing both the practice and our understanding of the field of education.

Helen and I are both alumni of the German Marshall Fund of the United States (GMF) and as such we are committed to strengthening transatlantic cooperation on regional, national, and global issues. With the Brock Prize, Helen and IMC Weekend School will achieve international recognition they need to continue building a global network of Weekend Schools. I sincerely hope you will consider Helen for the Brock International Prize in Education.

Sincerely,

Ahmed Aboutaleb.
[E-mail from Dutch Minister of Education to Heleen Terwijn, July 26, 2016, explaining that as a Minister she cannot send a letter of recommendation, and underscoring the importance of Heleen’s work. [Translated from the Dutch by IMC Weekend School]]

Dear Heleen Terwijn,

Herewith, I wholeheartedly congratulate you with your nomination for the ‘Brock Prize.’ Unfortunately, as a Minister I cannot write a letter of recommendation, unless it concerns a State Prize. But through this message, I’d like to ensure you the following:

As Minister of Education, the gap between children with higher and lower Social Economic Status is of growing concern to me - a gap that in our knowledge and technology driven society is at risk of widening. Unfortunately, also in the Netherlands.

I am deeply convinced that education should not establish or even widen this gap but bridge it. Not as the big equalizer but as the place where all youth gets the maximum opportunity to develop to the fullest of their capacities, and to become who they would want to be.

This asks for teachers that are highly capable of dealing with differences among children in the classroom, and do not act upon ‘implicit bias.’

This asks for safeguarding flexible transitions between school levels, in order to ensure that all students, at all moments in their school careers can re-invent themselves.

This asks for schools with a vision that capitalise on excellent coaching and conditions to maximise all students’ capacities.

And (since schools cannot achieve this alone) this also asks for social and private initiatives that help disadvantaged youth to build social networks, to develop the skills that they need to proceed in society, and to develop future perspectives - even if they do not develop these naturally in their home situations.

Your Weekend School is such a beautiful initiative. An initiative that started small and is spreading widely, because it works so well. An initiative that I fully support because it can fundamentally change youngsters’ lives, contributes to equal chances for all youth, and thus brings more justice and social connectedness to our society.

As far as I am concerned (and I will follow this up in my policy), initiatives like yours are indispensable and should be strengthened and imitated.

I sincerely hope that you win the prize, because that would be a more than just recognition for your fantastic work.

Best of luck and goodbye!

With best regards,

Minister Jet Bussemaker
To Whom It May Concern:

I am writing to let you know that we strongly support the recommendation of Ms. Hekten Terwijn for the Brooke International Prize in Education. Ms. Terwijn is a longstanding member of the U.S. Embassy in the Netherlands and we have developed a close working relationship with her IMC Weekenschool over the years.

Ms. Terwijn’s initiative to enable children from underprivileged communities to develop the necessary tools to not only succeed, but thrive in Dutch society is something we strongly value and support at the Embassy. This kind of private educational initiative is rare in the Netherlands, where education is centralized. Helten Terwijn observed that children from immigrant and low-income communities encounter substantial barriers in their young lives that most primary and high schools do not sufficiently address. She had the courage, vision, and energy to do something about it 18 years ago, recognizing institutions speak louder than words.

The IMC Weekenschool has grown over the years and currently has 16 schools around the Netherlands and more than 1,800 alumni. We recently hosted a group of IMC Weekenschool “ambassadors,” who are leaders among the alumni group, to discuss how to raise awareness of and support for the program among potential donors and donors. We also collected three young women ambassadors to participate in a women’s leadership program in Boston this summer.

Studies have shown that students from low-income households face significant barriers that persist through their school years, and as they become adults, they typically earn less than their peers and are at greater risk for health problems and crime. With the IMC Weekenschool, Helten Terwijn is fighting to overcome these risks, improving the quality of life for the most vulnerable Dutch citizens.

It has been a great pleasure to get to know Helten Terwijn and her staff over the years. We believe she is a perfect fit for the Brooke International Prize in Education.

Sincerely,

Adam H. Sterling
Chargé d’Affaires ad interim
To Whom It May Concern,

I am writing to show you my support of the recommendation of Heleen Terwijn for the Brock International Prize in Education.

I have become acquainted with Heleen Terwijn through the long term partnership between the IMC Weekendschool and my organization, the ING Nederland fonds. And see the inspiring, innovative and trailblazing role she plays in the field of education.

The mission of the ING Nederland fonds is to empower citizens and organizations that take initiative to strengthen Dutch society. We believe in the power of people, their impactful role in society and ability to bring positive change. The ING Nederland fonds supports people with plans and ambitions to help build a stronger and better society. Heleen Terwijn’s mission to enable children to prosper is a great example of that and we support her fully.

ING Nederland Fonds recently facilitated the biennial Weekend School alumni & partner event held at Nyenrode Business University. A day full of inspiration, interaction and pride. On this day the alumni return to the Weekend School platform to meet old friends, interact with the network of the Weekend School and inspire the younger generation of alumni. On this day people from different backgrounds, cultures and age groups come together determined to build a better, more tolerant society, one of which we can all be proud.

People like Heleen Terwijn are key to developing a more just, equal and positive society. Heleen Terwijn has devoted a great deal of her time to stimulate social cohesion, build a better future and has influenced the lives of thousands of children in the past years. We fully endorse Heleen Terwijn and consider her the candidate for the Brock International Prize in Education.

Sincerely,

Kirsten Ottens
Directeur ING Nederland fonds
Weekend School in the News

“Boxing forward” (page 2)

‘De Bron’ is a column in De Volkrant, one of the most renowned Dutch newspapers. The column asks people about who inspired them. For IMC Alumnus Virgil Tevreden, this was Heleen Terwijn.

Virgil was among Heleen’s first Weekend School students. Inspired by her enthusiasm, he now runs a non-profit organization for sport activities for young people with behavioral issues and/or a mental disorder. In the column, Virgil states that it was crucial Heleen gave him the feeling it was ok to make mistakes – that he was worth making an effort for. This has inspired him to invest in this youth himself.
2. NRC Handelsblad, Summary Weekend School Research (May 7, 2013)
"This school says: you can do this too" (page 3)

In 2013, IMC Weekend School in association with UvA (University of Amsterdam) conducted an extensive research, investigating the effects of Weekend School Education. NRC Handelsblad, one of The Netherlands’ larger newspapers, wrote an article on the outcome. The research showed Weekend School students are more confident than non Weekend School peers, have a better knowledge of the professional world, have a more substantiated idea of what profession they would like to pursue, and are able to name more of their qualities.
Vrijwilligers die kinderen vertellen over hun beroep en hen stimuleren verder te kijken. Weekendschool werkt, zo bleek deze week uit onderzoek.

Deze non-profit vakmanschap helpt oudere Nederlanders bij de zorg voor hun kinderen, die soms door verschillende redenen niet kunnen zorgen voor hun kinderen. De vrijwilligers worden gekozen op basis van hun expertise en kunnen in verschillende diensten werken om de kinderen te helpen.

De fysieke vorm van de school is strak georganiseerd, met een grote ruimte voor lezen en schrijven. Er zijn talrijke kinderen aanwezig, waarbij het belangrijk is om hen te helpen om hun toekomst te bereiken. De vrijwilligers spelen een belangrijke rol in het ondersteunen van de kinderen en hun familie.

De schoolboek is een uitstekend hulpmiddel voor de vrijwilligers. Het bevat veel informatie over de kinderen en hun behoeften. Daarnaast vormt het een goede bron voor praktische tips en adviezen voor de vrijwilligers.

De vrijwilligers dienen een volledig register van hun activiteiten in, waaronder de aantallen en de groepen van de kinderen. Dit is belangrijk om de effectiviteit van hun werk te kunnen meetellen.

De kinderen leren vaak te weinig buiten schooltijd.

Op de weekendschool gaan kinderen vaak op verzuim, bijvoorbeeld naar de rechthoek waar ze rotsomspilten spelen als acteur of rechter, of naar de kantoorbank waar ze met professionele koks deserts bereiden.

"Ik vond het legere vet spannend" - Amis Ishema, 17, uit Arnhem.

"Ik kreeg een medaille van Wouter Elias" - Maara Ajgul, 15, uit Hilversum.

"Ik durf nu op mensen af te stappen" - Oncoke Saurat, 12, uit Amsterdam.

"Wat vooral Labels" - Terrije, 14, uit Zwolle. "Kinderen die in de weekendschool zijn zijn vaak niet maar hun talenten zijn die het zeggen. Het is goed om te weten dat er ondersteuning is voor de kinderen die het hebben. Het is belangrijk dat we hen helpen om hun toekomst te bereiken."
3. Algemeen Dagblad, Portraits of Four Rotterdam Alumni and Their Ambitions (July 5, 2016)
“Having ambition is normal” (page 4-5)

Algemeen Dagblad is in the top three most read Dutch newspapers. The main message of this article is that there is not necessary a correlation between where you come from, and where you’re going. The four alumni in this article, all raised in disadvantaged neighborhoods, have big dreams.

At IMC Weekend School, Jermaine learned about what the world has to offer and now studies ICT management. He plans on applying for university and hopes to obtain an internship in the United States.

Sonata was able to nurture her curiosity to learn and overcome her shyness at the Weekend School, to the extent of speaking at two charity diners.

Seda was so intrigued by Medicine and the excursions to the hospital, it motivated her to study medicine at the university.

Stephanie tells us the Weekend School taught her self-presentation, and showed her a world that would otherwise have remained invisible to her.
Het gevoel dat hun vader of moeder relatief vaak schoonmaker is, wil nog niet zeggen dat kinderen uit achterstandswijken ook voorbestemd zijn voor de zwabber. Al 10 jaar richt de IMC Weekendschool zich in de Rotterdamse wijk Delfshaven op enthousiaste kinderen met honger naar kennis. Om hen te laten zien dat de wereld meer te bieden heeft.

AMBITIES HEBBEN IS normaal

Het is schemering en een Turks gezin loopt op de muzikale die door het Onderwijsengebouw van het Koninklijke MIK te Rotterdam, dat onderdeel maakt van de Weekendschool in het konvooi¬elijk gebied, op de jaren van de dichter Jan Bergsma zijn tot koop¬pen geraakt. Het maakte deel uit van de 2e kinderen van de IMC Weekendschool Rotterdam Delfshaven die sinds hun diploma hebben gekregen. Niet uit handen van de boerenzoon, zoals gesproken werd, maar door zijn eigen moed. Amelie Aberson had het een weekwedstrijd ontmoet met een kleuter, en er was een videobericht over hoe de Weekendschool ie het gebruik moest maken van de lessen die ze hadden gegeven. Ze vond dat ze veel moest doen om dat te doen, dat ze elke week weeringen kon. Ook stak ze de lezingen die ze hadden gehouden op het programma. Ze vond dat ze op de weekwedstrijd welke beroepen en studies er allemaal zijn. Maar ze had de ervaring dat ze verder geënt waren om belangrijk onderdeel van de weekwedstrijd. Ze vond dat de kinderen moesten spelen al dan niet met andere kinderen. En het was de weekwedstrijd die dus een vorm van medicinaal was dat anders hardheid, als problemenbijvallen. 4. Stadsnieuws Tilburg, Six Role Models (February 2 and 24, 2016)

"The Weekend School makes everything real" (page 6-11)

Four branches celebrated their ten year anniversary in 2016. Tilburg was one of them and celebrated with a role model campaign: over six Saturdays, six alumni appeared in the local newspaper with their stories. The posters they’re holding were also displayed in bus stops throughout Tilburg.

All six of them agree IMC Weekend School gave them great opportunities. Role model Maryem met Adam Sterling on the Embassy of the United States in The Hague: “Kennedy is my hero, and Sterling had just returned from his daughter. Isn’t that amazing? Especially if you realize this means I’m only one handshake away from Obama!” Or as Oussama says: “What other young person gets the opportunity to pick up a huge telescope and study the sun on a regular Sunday?”
5. NRC Next, Weekend School Initiatives in the Netherlands (February 11, 2015)

“They will really have to make it” (page 12)

An article in NRC Next, subsidiary of NRC Handelsblad, reviews the different weekend school initiatives in the Netherlands. Some weekend schools focus on children who fail be-
hind in class, others aim for the smart and eager kids. The section in the centre (“Weekend-scholen, Achterstand”) highlights IMC Weekend School as innovative for focusing merely on motivation.

6. Metro, Mediators of Brussels (TADA) (October 28, 2015)
“Brussels mediators” (page 13)

IMC Weekend School has three branches in Brussels, under the name Toekomst Atelier de l’Avenir (Atelier of the Future) or abbreviated TADA. In the French edition of Metro, an article about TADA explains the program, curriculum, alumni and the necessity of IMC Weekend School in Brussels.
Les médiateurs bruxellois

« Notre objectif est, d'ici 2020, de passer de 4 000 à 14 000 enfants. » C'est le slogan que nous avons choisi pour l'association. Le conseiller d'État Christophe Thomas (ASBL Mediatrice de l'Amicale) raconte: « Nous nous sommes lancés dans le projet il y a trois ans, à la demande de nombreux acteurs au niveau de la veille technologique, des institutions et des médiateurs. La mission est de permettre aux enfants de trouver un lien avec l'environnement et de comprendre que l'école n'est pas l'endroit où tout est facile. »

UN PROGRAMME SUR TROIS ANS

Tous les professionnels sont invités à participer. Des avocats, des juristes, mais aussi agents de police, gardiens de la paix ou gendarmes viennent soutenir des enfants. « Nous voulons que nos enfants soient les premiers citoyens du monde. »

LE PETIT JEU

Sofie Forts réclame que le projet soit mis en place dès maintenant. « Il est important de dire à l'enfant que le monde est un grand lieu et qu'il a le droit de voir des choses différentes. »

LA MISSION

C'est l'aide à l'enfant qui est dans une école de musique. »

L'ASBL TOEMKESTATERELERAVENIR (TADA) S'AGRANDIT

Mary Burns

7. L'Avenir, Rendez-vous with the future (TADA) (October 12, 2015)

“Rendez-vous with the future” (page 14)

An article in French newspaper l’Avenir summarizes the goals of TADA during a cooking class, in which the children learn all there is to know about restaurants and hospitality. TADA is run by Sofie Foets, shown on the photo in the red square.
Rendez-vous avec le futur

Avec l’ASBL TADA, des enfants issus de quartiers socialement vulnérables découvrent différents métiers.

Angèle Olivier

Bruxelles, samedi 14 novembre, des cris d’enfants se font entendre dans le restaurant Chez Henri et Agnès. Aujourd’hui, avec le ceintur de l’Avenue (TADA), ils découvrent l’univers de la restauration : la préparation du plat au service du client. Christelle, la propriétaire, répond aux questions : « Henri et Agnès, ce sont les pères de mes grands-parents, ils m’ont donné le goût des bonnes choses. »

TADA, c’est quoi ?

« Il faut faire ces devoirs parce que c’est bon pour plus tard. » Mais que signifie plus tard ? TADA l’explique de manière originale à des enfants âgés de 10 à 14 ans issus de quartiers bruxellois socialement vulnérables. Tous les samedis, pendant trois ans, ils expérimentent différents métiers. Participer à TADA est un engagement : pas question de rater un cours ! Mais cela ne les dérange pas, au contraire. « Je suis heureuse d’être ici et ça me rapporte du bonheur », explique Melek, 11 ans. TADA veut donner une nouvelle motivation aux enfants. Antonin Ponte, instituteur à Saint-Josse et photographe bénévole pour TADA, se souvient : « J’avais un élève en 5e primaire qui avait déjà une année de retard. Il a participé à TADA et cela l’a tellement aidé qu’il a décidé de passer son CER. Et il a réussi ! »

Un apprentissage de valeurs

Petits choux ou salade de fruits, les plats sont prêts. Alexandre, de la boulangerie La Maison Dandy, fait le point. « J’ai trouvé qu’ils étaient forts à l’école. Ils connaissaient déjà beaucoup de choses et c’était chouette de pouvoir les encourager sur leurs connaissances. » Christine est étonnée par leur sérieux : « Ils ont bien découvert toutes les saveurs. Ils ont tout compris. Tout est naturel chez eux. »

Sofie Forts, fondatrice de TADA, ne se limite pas à la découverte des métiers. « L’enfant apprend aussi la discipline, la persévérance. Avec les ateliers cuisine, il apprend à s’adresser poliment au client, à travailler en équipe ou encore à réussir les con- tines. »

TADA veut prévenir la démotivation et les pertes de perspectives, qui sont des causes de problèmes comme la fatigue d’apprentissage, le décrochage scolaire, parfois même le chômage de longue durée. Une action préventive pour que les enfants gardent leurs écoles dont les yeux, même s’ils vivent parfois des circonstances difficiles.

« Pour que l’autre ne soit pas considéré comme un autre »

Il y a une inégalité d’ensei-

gnement énorme en Belgique, affirme Sofie Forts. Cette inégalité, Antonin Ponte, instituteur dans un école de classe à Saint-Josse, la ressent tous les jours. « Dans les écoles plus aisées, les parents ont des relations qui ouvrent les portes. Grâce à TADA, les portes s’ouvrent aussi pour les enfants. Sans l’association, ils n’auraient jamais pu découvrir tout ce que nous ont découvert. »

Une inégalité qui a poussé Sofie Forts à créer TADA. Équivalente belge d’une initiative néerlandaise, M.E. Werkendchool TADA, outre en 2012 avec deux classes : une francophone et une néerlandophone. TADA est de plus, à la fin de cette année scolaire, 30 enfants auront suivi les cours. Néerlandophones, comme francophones.

Caroline Fédor, fondatrice de TADA, participe à l’atelier cuisine.

Léon Constanti a prévu un dialogue interculturel. Cette année, un atelier interculturel aura lieu. Il s’agira de mettre en place un dialogue interculturel. Pour Sofie Forts, c’était une évidence « d’être bénévole ». Partir avec l’autre, c’est aussi partir entre francophones et néerlandophones de Belgique. A.D.

Web Sites

MC Weekend School is expanding globally already, having successful sister schools in Brussels (three branches) and Hong Kong. The organization is currently looking out for social entrepreneurs who wish to set up Weekend Schools in their own communities.

Target areas are underprivileged (immigrant) neighborhoods in larger cities of Europe. Social entrepreneurs will be trained at the Weekend Schools’ headquarters in Amsterdam, and will receive subsequent on the ground support. Social entrepreneurs are expected to organize their own fundraising, and to set up their own independent organizations. As sister schools, we will work with the same concept and ideals, share knowledge, align pr, and organize alumni exchanges. Together, we’ll build a global network of Weekend Schools.

Weekend School Brochure
(Attached separately)
IMC Weekend School is a supplementary school for children (aged 10-14) in underprivileged neighborhoods, often of immigrant backgrounds, in the larger cities of the Netherlands. Through a three-year course, professionals (volunteers) introduce students to a wide range of topics, including journalism, medicine, law, entrepreneurship and the arts. The curriculum also includes training in presentation, research, debate and conflict resolution. It is an education focused on developing an all-rounded character.

Research shows that IMC Weekend School alumni have better professional prospects, are more confident, and feel more connected with society than control groups.

- Mutually interesting encounters
- Professionals as interesting guest teachers
- Focus on skills and talents
- Real-life subject matter
- Intriguing topics and classes
- Students are actively involved
IMC Weekend School consists of ten branches in underprivileged neighbourhoods in seven of the larger cities in the Netherlands. IMC Weekend School is also expanding globally, having sister schools in Brussels (three branches) and Hong Kong.

Flags indicate IMC Basis schools, where we are working towards systems change.
Towards Systems Change

IMC Weekend School works towards systems change. In a pilot called IMC Basis, we run Weekend School education in regular schools during regular school time with permission of the Ministry of Education. Following the positive results among students, teachers and guest teachers as well as the school neighbourhoods, IMC Basis is currently expanding.

“For me as a teacher, the mutual benefit for regular education and IMC Basis is obvious. When you compare time tables, it’s easy to save time or have subjects reinforce each other.”

- a teacher on one of the IMC Basis schools.

The effects of IMC Weekend School on self-confidence, future perspectives and social connectedness

IMC Weekend School
IMC Weekend School offers a two-and-a-half-year schooling program aimed at pupils between the ages of ten and fourteen. Passionate professionals volunteer to introduce their discipline and to provide the students with tasks that are derived from real life work situations. The students are stimulated to broaden their horizons by positioning themselves in diverse social roles and work situations, and by discussing actualities. Thus the students are encouraged to discover their own possibilities, capabilities, and affinities as to their future role in society.

The aim of IMC Weekend School education is to strengthen students in developing an open, curious, active and involved attitude that will help them reach a higher level of self-determination later in life. The expectation is that extensive self-knowledge, combined with knowledge about roles in society and with the experience of moving in diverse environments will contribute to the ability to make pro-active, better motivated, and more responsible choices for the future. This study focuses on three building blocks for a motivated, self-determined life attitude: self-confidence, future perspectives, and social connectedness.

The study
IMC Weekend School expects her education to increase students’ self-confidence, to broaden their future perspectives, and to enhance their sense of connectedness with society. A longitudinal study was conducted investigating whether participation in the Weekend School program indeed leads to growth on these three so-called ‘core concepts’. Thus the underlying study did not investigate long term effects, but focused on the two-and-a-half years Weekend School program when students were between ten and fourteen years old. The main research question of this study was:

Do students who attend IMC Weekend School show stronger development on the three core concepts than students with similar backgrounds, i.e. from the same neighborhoods, who did not attend IMC Weekend School?

The study was set up by the Research & Development department of IMC Weekend School and conducted under supervision of methodological sociologist Prof. dr. H.G. van de Werfhorst (University of Amsterdam). Participating in the study were all nine locations of IMC Weekend School (based in seven cities) and all students starting at the Weekend School in 2009. The Weekend School students were compared with a control group, existing of classmates of their regular primary schools not attending the Weekend School program.

Because of the Weekend School program’s unique setup and aims, specific instruments were developed in order to measure the expected effects. Earlier research (Van Klaveren et al., in
press) concluded that existing, validated, questionnaires were not sufficiently accurate to measure the specific non-cognitive skills stimulated by the Weekend School program. This study was special for its tailor-made instruments, among them the Weekend School Questionnaire (WSQ), developed and tested in the previously mentioned study. Also special were its unusually long duration and its thoroughness: over 700 students from seven different cities were followed longitudinally in five half year intervals.

The first wave of measurements was conducted in October 2009, before was known which of the primary school students would start at the Weekend School. The fifth and final measurement was conducted shortly before the Weekend School diploma ceremony in March 2012. At the start, 887 students participated (298 Weekend School students and 589 students from the control group). At the final wave, 718 students filled in the questionnaires (192 Weekend School students, 65 dropouts, and 461 control group students).

Baseline measurement
Analyses of the student backgrounds revealed that Weekend School students and students from the control group had very similar environmental characteristics. Both groups had similar gender distributions and students from both groups were as often raised by both parents, who were as often born in the Netherlands and spoke Dutch at home as often. Their social capital was also similar (such as meeting with friends, being on MSN, playing outside), as was the degree to which their parents undertook (cultural) activities with them, such as going to the cinema or to the zoo.

There were differences as well. On many of the non-cognitive indicators used in this research, Weekend School students initially scored higher. Moreover, for cultural activities performed on their own, there was a statistically significant difference between the two groups: Weekend School students more frequently read books, visited the library and searched for information on the internet.

Method
This study investigated whether Weekend School students develop stronger on the three core concepts than the control group (their classmates at primary school). For statistical analyses, panel fixed effects models were used to control individual differences between students. These models measured the individual growth that Weekend School students and the control group made during the five measurement waves. This study was not about the differences between the two groups, but about the differences in growth between the two groups. Initial starting differences were thus made irrelevant, i.e. controlled.

Results
The results are summarized below per core concept. All reported results are statistically significant.

Self-confidence
Weekend School students showed more growth than the control group on the concept ‘self-confidence’, as measured with six items with the WSQ (items with a 5-point Likert-scale). They showed a stronger growth on 1) the conviction that one succeeds if one does one’s best, 2) positive self-perception and 3) satisfaction with oneself. Weekend School students also showed
more growth on the concept ‘audacity’ (6 items about making responsible decisions in both the academic and the social context). They were more likely to defend classmates who are bullied, and more inclined to ask questions. Moreover, Weekend School students developed themselves more on subjective school performance. They increasingly reported better performance than their classmates and put more effort in schoolwork.

**Future perspectives**
The ‘future perspectives’ concept was measured with a broad range of indicators, most of them with open (descriptive) answer categories. On most indicators, Weekend School students showed more growth.

**Knowledge about professions.** When asked to give a description of professions (varying per wave), the accuracy of the answers of Weekend School students showed more growth than that of the control group. Weekend School students acquired better knowledge about a broad range of professions.

**Preferences for professions.** When asked about professions that students considered pursuing in the future, Weekend School students mentioned more professions than the control group. No differences were found for the so-called ‘typical higher professions’, namely ‘doctor’, ‘lawyer’ and ‘accountant’. Differences were found for other professions: Weekend School students mentioned more ‘special higher professions’, such as architect, pilot or judge, and more middle class professions, such as teacher, nurse or policeman. This answer pattern reveals that Weekend School students take into account a broader range of professions than the typical three high status professions. No differences were found for expressive/artistic professions, such as actor, DJ or artist.

**Reasons for considering a profession.** When students were asked about their reasons for considering a certain profession, Weekend School students more often referred to the nature of the profession (e.g. ‘doctor, because I want to make people healthy’) and less often to its status (e.g. ‘money’ or ‘prestige’). This answer pattern reveals that Weekend School students more often consider options for professions from their own personal motivation than from a societal standard image of what is ‘high’.

**Talents.** On the question ‘What are you good at?’, Weekend School students gave different answers than non-Weekend School students. They mentioned not more, but different talents: more social skills (e.g. helping people, listening), more specific competences (e.g. reading maps, speaking languages, first aid), and less sport talents.

**Linking talents to professions.** Weekend School students linked their talents to specific professions as often as the control group students. It seems that the necessary insight to link talents and professional options is not yet acquired at this young age. Further research should reveal if the connection between specific talents and specific professional options indeed will only be made at a later age, and if so, whether Weekend School alumni do this more often than their peers with similar backgrounds.

**Future perspectives (WSQ).** The WSQ had six items to measure general future perspectives. For example: ‘I have enough choice in what I can become later’ and ‘I like to talk about my future’. In the answers, no differences were found. The general questions of the WSQ thus did not show the differences that are found with the essay questions.
Curiosity. ‘Curiosity’ was slightly different from the other variables. IMC Weekend School expected students to already score high at the start of the Weekend School program. The program begins when students are ten years old because the Weekend School aims to feed the natural curiosity peaking at that age. Curiosity was included to explore its development but, contrarily to the other indicators, no growth was expected. Eight items in the WSQ measure curiosity (e.g., ‘If I see something new, I want to know how it is made’). No significant difference was found between the Weekend School students and the control group.

Social connectedness
‘Social connectedness’ was measured initially with the WSQ (4 items), focusing on ‘social support’ and ‘network’. No differences were found between both groups. Weekend School students did not experience that people may help them when needed more often. Neither did they experience more practical support from their environment.

In the last two measurement waves, more indicators measuring social connectedness were included. General knowledge was measured with 12 items (varying per wave). The results showed higher growth for Weekend School students on general knowledge. They developed, for example, a larger vocabulary and more knowledge about (world) politics than their peers. Moreover, a validated questionnaire on citizenship (Ten Dam, 2010) became available, of which some indicators were included. The questionnaire items revealed no differences for ‘knowledge about democracy’. However, Weekend School students knew better how to deal with differences between people than non-Weekend School students and thus scored higher on ‘empathy’. Because general knowledge and dealing with differences between people were only included in the last two waves, these results are methodologically less sound.

Conclusions
This study on the effects of supplementary education on non-cognitive factors is unique in size, duration and content. On all three investigated core concepts, growth was shown. Weekend School students showed more growth compared to control group students in several aspects of (1) self-confidence, including audacity in the academic and social context, (2) future perspectives, in particular growing knowledge about societal possibilities, more specific interest in societal possibilities, and a growing awareness of personal capabilities, and (3) social connectedness, in particular growing general knowledge and growing empathy.

Statistically all differences in growth have to be attributed to the Weekend School intervention. The fact that Weekend School students often had higher starting values than non-Weekend School students is irrelevant to the growth. Nevertheless the question may be raised whether the higher starting values would have led to stronger growth anyway, even without the program. On the conceptual level, it is important to mention that the concepts of investigation (self-confidence, future perspectives and social connectedness) specifically require social interaction. Even if a child is very receptive, strong growth on non-cognitive factors can only manifest itself in a nourishing environment.

Reflection and further research
This study is important because there is hardly any substantial research on the effects of supplementary education on non-cognitive competences. The fact that non-cognitive growth was measured for Weekend School students implies that relevant concepts had been operationalized effectively.
This study offers a foundation for further theory development concerning effective supplementary education. It offers directions for answering the question how (supplementary) education can best prepare students for making better-motivated choices in their education and professional career. Questions that merit further investigation are, for example:

- Is a certain threshold for receptiveness required, or can growth (perhaps with modifications in the program) be realized for all children? If so, how?
- How are these non-cognitive development factors related to each other? Is there an order of development? Are there receptive ages for the different factors? Do they support each other?
- How are these non-cognitive development factors related to the ability to make better motivated choices? Are all of these factors required? Are there more essential preconditions?
- How and when do children link specific talents to specific career possibilities? Is this link indeed only made at a later age? If so, do Weekend School alumni do this more often than their non-Weekend School peers?

For IMC Weekend School the main question exceeds the Weekend School practice: how can supplementary education best be designed to stimulate self-determination in a motivated life attitude? To answer this question, several types of research are required. In particular: (1) conceptual (qualitative) research into the content and the determinants of ‘better motivated choices’, also outside of the Weekend School practice, (2) continuing longitudinal research among Weekend School participants compared to control groups, aimed at the abovementioned types of questions, (3) research into life courses of Weekend School alumni compared to control groups. Further research should focus on all three types of studies.
Introduction

This is the management summary of a quantitative study of IMC Weekendschool alumni that was conducted in 2015-2016 by the Universiteit van Amsterdam, the Vrije Universiteit Brussel and IMC Weekendschool. The study consisted of two phases: a preliminary qualitative study and a quantitative study. This summary is based on a Master’s thesis on the quantitative part of the study (De Groot, 2016).

The aim of this study was to identify the long-term effects of the Weekendschool. The aims of the Weekendschool education should be palpable in the lives of the alumni, which makes them the best source of information for measuring the effects of the Weekendschool. In order to gather as much information as possible and to ensure that our influence on the survey was kept to a minimum, we first engaged in an open discussion with alumni in 33 interviews plus two practice interviews. These interviews that were principally designed for the preparation of the quantitative part of the study (i.e., the survey), also provided some interesting insights. Noteworthy is the finding that the Weekendschool intervention reportedly has more effect on pupils who experience more problems during their primary education. This shows that the intervention has more effect for the intended target group.

The best way to study what effects the Weekendschool has had on alumni is by conducting interviews and surveys. In theory, studies that aim to determine the effects of a particular intervention should be experimental in nature: they should include a control group, and the effects should be measured before and after the intervention (pre- and post-measurement). In the case of the IMC Weekendschool, this was not possible because there was no pre-measurement available. Even more importantly, it was impossible for us to assemble a control group in an ethically acceptable manner. For this reason, the most appropriate method of identifying the effects of the Weekendschool was a descriptive study based on interviews and surveys. This method also has an advantage in that a survey can directly ask about alumni’s experiences of IMC Weekendschool. In an experimental study this would be impossible because one cannot ask a control group something about what it has not experienced.

The most important input for the questions in the questionnaire was the 33 interviews. Other preparatory sources that were used included: earlier studies on the Weekendschool; (other) information from the impact map, a map illustrating the impact of the Weekendschool on all stakeholders including guest teachers, partners and sponsors; workshops with employees; and discussions with IMC Alumni, the department within IMC Weekendschool that coordinates alumni relations. The result was a comprehensive questionnaire that could be completed by respondents within approximately a half hour. Respondents were able to take the survey online on their own preferred device via the Qualtrics Survey platform, which is used by universities around the world. Roughly speaking, the questionnaire included four types of questions: biographical questions about the respondent’s life and lifestyle (23); control questions to verify that respondents actually read the questions (22); questions about the actual effects of the Weekendschool (133), and seven questions in which respondents were asked to give their view on the Weekendschool. Apart from the biographical questions, all questions were answered on a five-point scale: 1. not at all applicable, 2. somewhat applicable, 3. average applicable, 4. very applicable, and 5. completely applicable.

The following Weekendschool concepts formed the basis of the questions in the questionnaire: Making choices; Motivation; Future perspectives; Social Connectedness; Self-confidence; Social skills; Content (of the subjects); and Results (applying the knowledge obtained at the Weekendschool in one’s own life). In addition, these concepts were cross referenced with a generally accepted theory: the theory of social emotional learning (SEL) (Elias, Zins, Weissberg, Greenberg, Haynes, et al., 1997; Shriver, Schwab-Stone, & DeFalco, 1999; Zins, & Elias, 2006). In addition to being a theory, SEL is also a teaching
practice that was originally used within mainstream education but can also be applied elsewhere. The SEL model distinguishes the following concepts:

- Skills (self-management, problem-solving, decision-making, communication);
- Attitudes (towards oneself, towards others, and towards one's work);
- Knowledge (understanding of physical well-being, relationships, school and opportunities within society to become involved in).

Crossing these SEL concepts with those of the Weekendschool results in a matrix in which each cell is a specific manifestation of a possible Weekendschool effect. On a theoretical level, this exercise can be seen as a cross-validation of the Weekendschool concepts. But more importantly, using this approach was beneficial from a practical point of view, as we were able to remove redundant questions from overcrowded cells of the matrix and fill in cells that were found empty. This exercise even generated a number of additional questions that had not been identified in the preparatory phase.

After analysing all our survey questions, three questions proved to be unsuitable because they had been formulated ambiguously. In addition, we were unable to use the eight questions on work/completed education and the one question about parenthood because only 10 respondents had completed their studies (as their main activity) and only two respondents had a child. As a result, a total of 13 questions were dropped from the survey.

Prior to sending out the survey, the email addresses of all the alumni were checked. We were able to track down the email addresses of 968 (53%) of the total 1,823 alumni. The questionnaire was completed by 194 alumni (20% of the sample, or 11% of the population).

**Results**

All the respondents were included in the analysis, as the responses to the control questions demonstrated that everyone had filled out the questionnaire seriously, and an analysis of the response patterns suggested that there was no trace of socially desirable responding. Of the 120 questions on all the possible influences that the Weekendschool could have, respondents said they experienced an above-average influence (>3) on 105 questions, and a below-average influence (<3) on 15 questions. Table 1 shows the number of questions whose responses were significantly higher or lower than 3 for different significance levels. The average for all questions was \( m=3.43 \), while the average of the 79 questions whose responses were significantly higher than average was \( m=3.65 \) (at significance level \( p<0.001 \)).

*Table 1: Number of questions relative to the neutral category (higher/lower/average) per significance level*
Below in Table 2, the 10 highest scoring questions are shown, i.e. those aspects of the Weekendschool that the alumni experienced as having the most influence. Table 2 also shows the four lowest scoring items.

In order to assess the psychometric quality of the questionnaire, we constructed scales for each of the SEL concepts as well as the Weekendschool concepts with the 10 items that contributed the most to the questionnaire's reliability. An exception to this was the scale for future perspectives, which had seven questions. All scales had a high level of reliability (Cronbach’s alpha=0.87–0.93). The average item score of the concepts was between \( m=3.39 \) and \( m=3.67 \). This means that for all the SEL concepts and for all the concepts used by the Weekendschool, alumni experienced an average to strong influence of the Weekendschool.

*Table 2: Highest and lowest scoring items (N=194); all items shown are significant \( p<.001 \)*

In order to assess the dimensionality of the questionnaire, a factor analysis was conducted. This revealed one major factor—which explains almost half (48%) of the variance—that overshadowed all the other factors. This factor can only be interpreted as ‘the general Weekendschool experience’. The alumni were unanimous (or, to put it another way, very homogeneous) in their perception of the Weekendschool. Given the heterogeneity of the group, the homogeneity of the Weekendschool experience is striking. We can only conclude that the Weekendschool experience among alumni is very strong and very unanimous.
Management summary kwantitatief alumni onderzoek IMC Weekendschool 2015-16

From a technical point of view, the commonality of the Weekendschool experience means that, on the basis of perceptions, it was not possible to distinguish between different respondent groups. It was also pointless to compare different sub-populations with each other because we cannot expect to find any differences between them. In order to verify this assumption, we conducted comparisons between two sub-populations: men and women were compared, and active alumni were compared with those alumni who no longer maintained any contact with the Weekendschool. As expected, both comparisons did not exhibit any significant differences in degree between the different groups in terms of their Weekendschool experience.

Discussion

The 20% response rate can be considered high to very high compared to other studies with the same medium, especially considering the background and age of the population. The fact that active alumni and alumni who have not maintained contact with the IMC Alumni network did not differ in the degree of their experience is an important finding, because this tells us that the questionnaire is not biased and also that the active alumni’s responses to the questionnaire were unbiased. This result also demonstrates that the sample is most likely representative and that the results can be generalised to the entire population.

The findings show that Weekendschool alumni were influenced by their Weekendschool education in numerous areas. The alumni are largely positive about their time at the Weekendschool: they indicated that they would not have wanted to miss out on going to the Weekendschool (m=4.41). They also look back positively on their time at the Weekendschool (m=4.54). Alumni appreciated the way in which the Weekendschool transfers knowledge via guest teachers from the working world: the respondents thought the new knowledge was interesting (m=4.52), they learned more about their own interests (m=3.74) and they enjoyed attending the Weekendschool (m=4.37). As a result of the Weekendschool, alumni experience broader future perspectives (m=3.86) and more personal influence on being actively involved in society (m=3.67). The respondents indicated that, as a result of the Weekendschool, they learned that you should always ask questions when necessary (m=4.13), that it’s OK to make mistakes (m=3.96), and to pursue one’s own interests (m=3.88) and abilities (m=3.86).

The goal of the Weekendschool is to have students learn to make autonomous, motivated and conscious choices—and not necessarily to have them know at a young age what study or vocation they want to pursue. This goal is reflected in the results of this study: alumni indicate that it was not so much what they wanted to study or what profession they wanted to follow that they learned at the Weekendschool (m=3.14) as how they could achieve something (m=3.84), how to make a plan (m=3.75), and to persevere (m=3.91). They learned to base their choice of profession on their own preferences: on what they find interesting (m=3.66) and what they want (m=3.74). Moreover, alumni felt that the Weekendschool helped them in making their career choices (m=3.57).

Weekendschool alumni indicated that, as a result of the Weekendschool, they had a favourable view of education in general (m=3.68). By giving children a peek into the future and by showing them what their possibilities are, they prove to be more motivated to finish high school (m=3.52) and they want to continue to learn thereafter (m=3.77).

Interestingly, alumni say that at the Weekendschool they saw how it was possible to interact with adults in a fun way (m=3.96). This is consistent with other research studies that show that children in extracurricular activities benefit from the positive interaction they have with adults (e.g. Catalano, Berglund, Tyan, Lonczak, & Hawkins, 2004; Cosden, Morrison, Gutierrez, & Brown, 2004; Durlak, Weissberg, & Pachan, 2010; Huang, Kim, Cho, Marschall, & Pérez, 2011; Mahoney, Larson, Eccles, & Lord,
2005). However, the alumni also indicated that they maintained very little contact with valued contacts they made during their time at the Weekendschool (m=2.36). This suggests the need for the IMC Alumni department to step up its activities. If Weekendschool alumni were given more opportunities to stay in touch with their former guest teachers, the positive effects of the Weekendschool could be even stronger.

One snapshot finding of this study is that alumni indicated a willingness to contribute to society as a result of the Weekendschool. This is not just a matter of words; they actually act on this. The alumni express their social engagement by working as volunteers (53%) and taking care of family and friends (96%). The alumni attribute their social engagement to the Weekendschool, which demonstrates that the Weekendschool’s aim to form its students into caring and active citizens is achieved.

Conclusions

Given that the Weekendschool produces many different and divergent effects and given also the need to minimise bias by limiting the number of topics, a relatively long questionnaire was necessary for this exploratory research study.

The findings of this study are interesting for several reasons. What stands out the most is the general consensus among the alumni. No matter how active they remained after finishing the Weekendschool and no matter which Weekendschool site they attended, the alumni’s answers were homogeneous. This proves that the Weekendschool has succeeded in establishing a strong concept, replicable across its different sites, that produces the same positive effects in all students regardless of which Weekendschool site they attended.

The second finding that is noteworthy is that alumni were influenced in practice by all the theoretically formulated Weekendschool concepts (especially self-confidence, future perspectives, motivation and perseverance). This is an important result because it is a quantitative validation that the Weekendschool does achieve the goals that it propagates. Participation in the Weekendschool is not automatically assessed as positive (e.g. as a fun pastime) but as something formative and life-defining. Despite the open approach of this study and the many kinds of questions included in the questionnaire (e.g. also about anti-social behaviour and substance abuse), alumni scored questions related to the intention behind the Weekendschool concept unanimously high.

Third, the results demonstrate that the Weekendschool not only achieves all its self-formulated objectives but also promotes all the concepts formulated by theorists of social emotional learning. This opens up the possibility of a broader positioning and embedding of the Weekendschool, as the Weekendschool’s approach has significant effects on concepts that are widely accepted internationally.

Of all the stakeholders of IMC Weekendschool, the students and alumni are the most important: the school revolves around them, and it is because of them that the Weekendschool exists. It is therefore gratifying to see that our open and informed research has verified that alumni have a very positive assessment of the Weekendschool and that the Weekendschool has had the effects that it seeks to have on them. These positive results are of the utmost importance for all the stakeholders of the Weekendschool: for the employees, who observe that their hard work has borne fruit; for the parents, who see that their support has paid off in the form of a tangibly better position for their child; for the financiers, for whom the worth of their investment is reflected in motivated citizens; and for the management and the board who see the Weekendschool’s objectives validated.
This study into the long-term effects of the Weekendschool can be considered completed. It would only be interesting to replicate this study once a larger number of alumni are active in the labour market—something that will have to wait for several more years. This research suggests that the Weekendschool can embed itself more firmly in the ongoing discussions on education by examining social emotional learning in more depth—by determining more precisely how the more concrete Weekendschool concepts relate to the more abstract SEL concepts and by making comparisons with existing SEL practices. This requires a review of the literature as well as a comparison with SEL practices. For now, the results of this research will serve as a basis for the IMC Weekendschool impact map. In addition, a shorter version of the questionnaire will be prepared that in time can be used for further research on Weekendschool alumni and alumni of IMC Basis.

Literature

support and encouragement they need to feel good about learning. That is why Pathways to Education provides pupils with a support worker to act as a surrogate parent, coach and mentor. Yet relationships with adults are probably less important than the peer influence children come under: what their friends are doing and whether learning is regarded as cool. That is why good schools are often like communities in which students encourage and support one another.

Perhaps the most important factor that draws people back to learning is that it can be a rewarding and enjoyable experience: it is intrinsically rather than socially or economically rewarding. As cognitive scientist Daniel Willingham argues in *Why Don’t Students Like School?*, efforts to make lessons seem relevant and feel contemporary will not work for long. Students will see through such superficial devices. Relevant content is far less important, Willingham shows, than how pupils are invited to engage with it, what they can make of it. The most rewarding and exciting learning often involves subjects that go well beyond a pupil’s everyday experiences and which stretch their imaginations. It does not have to be relevant to their everyday life. To be motivating, learning has to be meaningful for students. They have to see where what they have learned fits into what they already know and what the point might be. Learning has to excite people’s curiosity but then help them safely navigate their way across the unfamiliar terrain. Nor does it count for much, Willingham says, if a teacher is nice, personable and tells good jokes only for their lessons to be poorly-organised, badly-planned and without a clear purpose: “The brilliantly well-organised teacher whom fourth graders see as mean will not be very effective. But the funny teacher, or the gentle storytelling teacher, whose lessons are poorly organised won’t be much good either. Effective teachers have both qualities. They are able to connect personally with students, and they organise the material in a way that makes it interesting and easy to understand.” That philosophy is at the heart of one of our other innovators, the IMC Weekend School in the Netherlands, created by Heleen Terwijn.

Effective teachers have both qualities. They are able to connect personally with students, and they organize the material in a way that makes it interesting and easy to understand.

Terwijn, a psychologist at the University of Amsterdam, was researching the high rates of unemployment and crime amongst the Surinamese community in the south of the city, when she came across a puzzle. The teenagers she met were downbeat, demoralised, demotivated and about a quarter of them were depressed. They seemed to have no faith in their ability to shape their future and could see little point in going to schools that seemed designed to channel them into a dead end. Yet the same children at the age of 10 were engaged, excited, hopeful: they believed anything was possible. What was it, Terwijn wondered, that changed, usually between the age of 10 and 13, to so demoralise these children?

The heart of the problem is that, at the age of 12, children in the Netherlands sit an exam which determines which of five kinds of secondary school they will enter. In general only students from the top two academic streams make it into higher education. Extreme motivation is required for a student to work their way out of one stream and into another. Once these bright, open and energetic children find themselves confined to one of the lower academic streams the world closes in on them. They see little point in learning and they are given precious little encouragement to do so.

Terwijn hit upon a solution which involved reinventing an old idea: the Sunday school. Modern mass education systems in Europe can trace their roots to Sunday schools set up by churches in the eighteenth and nineteenth century. Terwijn decided she would set up a Sunday school with a twist: a place where children from the poorest backgrounds could meet and be taught on short courses run by professionals passionate about their field — doctors, vets, lawyers, advertising executives, designers. If the students could feel the passion of these professionals, have their horizons opened up and see how learning connects to the real world, that might motivate them to learn, Terwijn figured.

Terwijn completed her university research in December 1997 and devised the plan for the first Weekend School on the back of an envelope. She was lucky enough, through a friend, to meet Rob Defares, the managing director of a trading company IMC, who stumped up the money for the first school, which Terwijn opened with 30 students in January 1998. After a lengthy period of trial and error, Terwijn honed her model. This is how it works.

Each Weekend School is open every Sunday during the school term for about 100 children from three school years, from schools in the lowest tier of the secondary education system. The Weekend Schools take place in borrowed offices and buildings; some loaned by universities, others by companies. Each school has three staff to plan the programme and look after each year group. Those staff organize a roster of guest and volunteer
Helen Terwijl (Top Left), founder of the IRC Weekend School network in the Netherlands, and young people who come to the Weekend School to take part in collaborative and creative projects that introduce them to new disciplines and increase their motivation for learning, led by tutors who are usually professionals in fields such as advertising, the law and medicine.
teachers who run classes and help students with their school work. The point, Terwijn says, is for children to be able to navigate their own paths in life. But that is easier said than done: “I loathe the projects that think if they take kids to the concert hall they will say ‘Oh! I will go forever because I suddenly fell in love with classical music!’ I mean, come on, that’s not how it works. We are talking about the way that kids give form and shape to their lives and how we can help sustain that.”

The Weekend School aims to add motivational spice to the dull educational diet these children endure. Weekend School is designed to be fun. It involves practical work and often a visit to someone’s workplace: the zoo to see a zookeeper at work; a court to see a judge. By introducing them to aspirational role models, the School helps to broaden their horizons, as Malle Dotinga, an advertising executive and one of the guest teachers explained: “If you live in an area like these children live in, you don’t meet people in professions. Your view on your possibilities in the world is very limited. What Weekend School does is help children discover that there are so many more possibilities.” Weekend School students, the evaluations show, have more sense of agency and control over their lives than their peers, and so, Terwijn maintains, they are more likely to want to carry on learning.

Others agree. Terwijn took her time to iron out all the kinks in her model. When she was ready to expand it took almost two years to find her second sponsor, IBM. That gave her the credibility to approach other corporate sponsors. There are nine Weekend Schools in cities across the Netherlands and about 30 schools that emulate the model. The Weekend School, like Pathways to Education, does not change what is taught at school, nor how it is done: what the two programmes add is the catalyst of motivation. They are like outboard motors, added onto the system to propel it forward.

The great strength of state education systems is that they can mandate that children should go to school. As a result they do not have to worry about marketing, advertising or sales. Schools open their doors and children have to come. The weakness of state education is the flip side of this: as a result these systems pay too little attention to what motivates children to learn. Too many children can be physically present but psychologically absent. Innovations to motivate children to learn are as important as hot chilli is to a spicy curry. Take it away and you’re left with something very bland.
